

Sorry, Professor,
the dog ate my thesis
*How to expect the unexpected
when using L^AT_EX*

Peter Flynn
Human Factors Research Group
Department of Applied Psychology
University College Cork

Living and Working with L^AT_EX
London Mathematical Society
20 October 2006

- 1 A little bit of background
- 2 Trips and traps
- 3 Expectans expectavi

The full paper is available online at
<http://epu.ucc.ie/articles/lms06>

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'
- 'Help! Where have all my figures gone?'

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'
- 'Help! Where have all my figures gone?'
- **! I can't find file 'thesis'.**

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'
- 'Help! Where have all my figures gone?'
- **! I can't find file 'thesis'.**
- **ERR 32768 Kernel panic**

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'
- 'Help! Where have all my figures gone?'
- **! I can't find file 'thesis'.**
- **ERR 32768 Kernel panic**
- Sounds familiar?

Sorry, Professor, the dog ate my thesis

- 'Help! My bibliography "doesn't work" ...'
- 'Help! My equations "aren't right" ...'
- 'Help! Where have all my figures gone?'
- **! I can't find file 'thesis'.**
- **ERR 32768 Kernel panic**
- Sounds familiar?

Sounds familiar?

- Probably because it is
- Breakdowns are the last thing you want
- They always occur at the last minute
- They usually involve things that have been working fine until now
- They require expertise you haven't acquired yet
- 'Why don't "they" fix it?'
- Expect the unexpected

A little bit of background

- T_EX was designed for computer scientists and mathematicians
- Interfaced with programmable logic via a dumb terminal
- No other interface available or envisaged

A little bit of background

- $\text{T}_{\text{E}}\text{X}$ was designed for computer scientists and mathematicians
- Interfaced with programmable logic via a dumb terminal
- No other interface available or envisaged
- Knowledge of the original $\text{T}_{\text{E}}\text{X}$ language no longer required
- $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ and $\text{ConT}_{\text{E}}\text{Xt}$ provide an extensible logic-based interface
- Some regularisation and standardisation of command syntax

A little bit of background

Visual interfaces

- Extensive selection of editors
- Available on all platforms
- Penny plain, twopence coloured
- Some have synchronous typographical interfaces
- None of them approach the expectations of new users outside computing and maths
- \LaTeX is not alone: XML has the same problem

Trips and traps

- Tips based on support experience
- Wholly unscientific
- Factual, not anecdotal

Trips and traps

- Tips based on support experience
- Wholly unscientific
- Factual, not anecdotal
- \LaTeX is better-looking. . .
- . . . longer-lasting. . .
- . . . and can save about two months formatting time off the average 3–4 year PhD writing cycle

The FAQ

- The FAQ is at <http://www.tex.ac.uk/faq>
- Your first port of call for queries
- Check here before asking questions in other public forums
- Covers only *frequently*-asked questions

CTAN

- The Comprehensive T_EX Archive Network
- Hosts all the free software relating to T_EX systems
- Rooted at <http://tug.ctan.org> (TUG),
<http://www.dante.de/software/ctan> (DANTE),
and <http://www.tex.ac.uk> (UKTUG)
- Everything from CD/DVD images down to the smallest configuration file

Packages

- The plug-in components of \LaTeX
- Hundreds of them, providing refinements, formatting solutions, and fonts
- Learn how to download and install them
- Some \TeX systems (eg \MikTeX) provide automated download-and-install-on-demand

Usenet News

- The **comp.text.tex** newsgroup
- The primary discussion forum for T_EX matters
- Assumes you have checked the FAQ first before asking a question
- Access it via a newsreader, news-capable mailer, or Google Groups
- High traffic (100 posts a day is not unusual, so a good newsreader will save you time and effort)

'My equations won't...'

... line up, number themselves, use the right font, fit the width, etc

- A significant topic of enquiry on the newsgroup
- Mathematicians are constantly reinventing mathematics
- No substitute for RTFM
- See reading list in *Formatting Information*, p. ix

Get equipped!

- Plenty of usable interfaces around but a knowledge of \LaTeX is required

Get equipped!

- Plenty of usable interfaces around but a knowledge of \LaTeX is required
- Bibliographic software

Get equipped!

- Plenty of usable interfaces around but a knowledge of \LaTeX is required
- Bibliographic software
- Graphics editor (bitmap and vector)

Get equipped!

- Plenty of usable interfaces around but a knowledge of \LaTeX is required
- Bibliographic software
- Graphics editor (bitmap and vector)
- Spellchecker
- Thesaurus

Bibliography

- Use BIB_TE_X
- Use *JabRef*
- Download formats like RIS or SilverPlatter
- Find out what reference format is required
- Try to avoid obtuse or degenerate reference formats

Keep a copy online

- Upload relevant documents to your web site
- Hide them if you don't want them browsed
- Give the URI to contacts and colleagues
- Create a site (or a page) describing your research
- (Some institutions mandate this anyway)

Learn to write simple macros

- Even simple definitions can be used to avoid mistyping
- Useful for very frequently-repeated objects
- Provides consistent formatting
- Can act as a label for use when searching
- Can be re-used without limit

The best form of attack is defence

- *Your* defence
- You're the expert
- Make your document bulletproof (whatever about your arguments!)
- It's about communication, not showing off

Formatting style

- Keep It Simple, Stupid!
- Don't use quirky layouts
- Avoid flowery typefaces
- Stick to the conventions of your discipline
- Obey the institution's formatting rules
- Be consistent
- \LaTeX will make it legible: *you* have to make it readable

Structural style

- *Entia non sunt multiplicanda praeter necessitatem*
- Most readers can hold three levels of sectional structure in their head while reading
- More than that and you'll lose them
- If unavoidable, make sure there are indications on the page as to what depth you're at
- Same goes for lists (avoid nesting)
- Stick to simple decimal numbering scheme (unless mandated otherwise)

Writing style

- Eschew obfuscation
- Write for the intelligent, informed, and expert reader from a closely-related domain
- No need to explain the obvious
- Cite anything that requires a leap of faith
- Extraordinary claims require extraordinary proof
- Keep sentences short
- Don't be afraid to use a long one where there is a complex point to be made
- Write complete sentences
- Use the first person unless otherwise instructed

Backup

- Try not to lose your thesis
- Document, illustrations, data, supporting material
- Use an editor which creates a safety copy
- Duplicate the whole thing onto CD, DVD, or USB memory regularly
- Keep a recent copy out of the office or lab or home
- Be aware of the media lifetime

Expectans expectavi

- Patience is a virtue in a researcher
- Background skills are needed as much as foreground
- ECDL is not all it's cracked up to be
- Become competent in using your computer
- Be aware that the way you (or your colleagues, or institution) do things is not the only way

Expectans expectavi

- Patience is a virtue in a researcher
- Background skills are needed as much as foreground
- ECDL is not all it's cracked up to be
- Become competent in using your computer
- Be aware that the way you (or your colleagues, or institution) do things is not the only way
- Have fun!
